Biology

To obtain specific admissions requirements on how to apply to Graduate School, prospective students should visit this page: https://www.uab.edu/cas/biology/graduate-program/the-ms-program

Degree Offered: Ph.D., M.S., 5th Year M.S.
Director: Stephen A. Watts, Ph.D.
Phone: (205) 934-9685
E-mail: sawatts@uab.edu
Website: http://www.uab.edu/biology/

Program Information

Areas of Specialization

Graduate students in the M.S. and Ph.D. programs in biology may specialize in research activities at all levels of biological organization, with emphases on ecophysiology, cellular and molecular biology, endocrinology, and ecology of aquatic organisms, or on models related to human disease.

Admission

For admission in good standing, applicants must meet the following requirements, in addition to the Graduate School's standards: an undergraduate degree in a biological science, B-level scholarship in all biology courses, two semesters of organic chemistry, two semesters of physics, mathematics through calculus, and a minimum of 152 on both the verbal and quantitative portions of the GRE General Test, and a personal statement of career goals. The graduate program director in biology must approve admission on probation or with deficiencies in one of the above requirements. Three letters of evaluation from individuals who have a thorough knowledge of the applicant's academic abilities and potential are also required. It is strongly recommended that a student contact a mentor before applying. Students may enter at the beginning of any semester, with deadlines of March 1 for summer and fall applicants and October 15 for spring applicants.

Coursework, Thesis, and Dissertation

A dissertation embodying the results and analysis of an original experimental investigation is required for Ph.D. candidates. Students in the M.S. program may write a thesis based on a research project (Plan I) or, alternatively, may elect to submit a nonresearch project incorporating a review and analysis of one or more topics of current or historical interest in biology (Plan II).

Since scientific problems encountered today are multifaceted and require multidisciplinary approaches, students are expected to acquire a broad background in the physical and life sciences. Doctoral students must complete formal course work in or have equivalent training related to six of the following seven areas: ecology, physiology, cell biology, developmental biology, genetics, microbiology, and molecular biology. Master's students must have competency in five of these life-science areas. Each student is also expected to satisfactorily complete a course or sequence in biometry and any advanced courses designated by the student's graduate study committee consistent with the chosen area of specialization.

Each student must also enroll in three seminar courses approved by his or her graduate study committee, and one of the seminars must be outside the student's primary area of specialization. Also, each student is required to demonstrate proficiency in teaching by delivering formal course lectures or by conducting instructional laboratories. Certificates for advanced training in teaching are also available.

Examinations

To qualify for candidacy, a student in the Plan I master's program must satisfactorily complete either a written or an oral comprehensive examination. A doctoral student must take both written and oral comprehensive examinations. As part of a student's final defense of his or her dissertation or thesis, a public departmental seminar must be presented.

Class A Teaching Certification

Under the Alabama Department of Education's "Strengthened Subject Matter Option," students who complete requirements for the master's degree in biology can also receive class A teaching certification, providing that certain prerequisites and requirements are met. Complete details are available from the School of Education Certification Office, EB 100, 1530 3rd Avenue South, Birmingham, Alabama 35294-1250 (Telephone 205-934-5423).

Accelerated Learning Opportunities

Biology offers both a Fast-Track and Accelerated Bachelors/Masters (ABM) (http://catalog.uab.edu/graduate/admission/#text) option for high-achieving undergraduate students. The following courses are approved for shared credit for students pursuing an ABM in Biology: BY 501, BY 511, BY 520, BY 535, BY 540, BY 567, BY 568, BY 569, BY 570, BY 605, BY 607, BY 618, BY 626, BY 629, BY 633, BY 634, BY 637, BY 640, BY 642, BY 650, BY 651, BY 655, BY 656, BY 656L, BY 668, BY 674, BY 675, BY 689, BY 696

Additional Information & Mailing Address

Deadline for Entry Terms: Each semester
Deadline for All Application Materials to be in the Graduate School Office: March 1 for summer and fall; October 15 for spring admission
Number of Evaluation Forms Required: Three
Entrance Tests: GRE (TOEFL and TWE also required for international applicants whose native language is not English.)

Contact Information

For detailed information contact Dr. Stephen A. Watts, Graduate Program Director, UAB Department of Biology, CH 375, 1720 2nd Avenue South, Birmingham, Alabama 35294-1170. Telephone 205-934-9685

Physical Address

UAB Department of Biology, Campbell Hall, Room 464, 1300 University Blvd., Birmingham, Alabama 35294-1170.
BY-Biology Courses

BY 501. Advanced Genetics for Teachers I. 3 Hours.
Basic genetic principles; recent research developments. Prerequisite: Permission of Instructor.

BY 502. Botany for Teachers. 3 Hours.

BY 503. Advanced Biology for Teachers III. 1 Hour.
Laboratory supplementing lecture (BY 502) through use of human specimens, models, and demonstrations.

BY 504. Life Science for Middle School Teachers. 3 Hours.
Life Science for Middle School Teachers.

BY 507. Microbial Ecology. 3 Hours.
Microorganisms in nature; interactions with each other and with environment. Independent project required. Prerequisite: BY 271.

BY 511. Molecular Genetics. 3 Hours.
Prokaryotic and eukaryotic gene structure and function. Independent project required. Prerequisites: BY 210 [Min Grade: D] and BY 330 [Min Grade: D] and CH 234 [Min Grade: D]

BY 515. Human Anatomy for Educators. 4 Hours.
Principles of vertebrate structure with emphasis on gross and microscopic human anatomy. Survey of human embryology and evolution. Lecture and laboratory. Graduate project/presentation required.

BY 527. Histology. 4 Hours.
Microscopic anatomy of cells, tissues, and organs of animals; correlation of structure and function. Techniques and methodology. Lecture and laboratory. Completion of additional independent project required for graduate credit.

BY 527L. Histology Laboratory. 0 Hours.
Histology Lab required with BY 527 lecture.

BY 530. Graduate Cell Biology. 3 Hours.
This course will introduce students to key concepts of cell biology with a focus on cellular components, cell metabolism, cell organization, molecular dogma, cellular trafficking, cell cycle, cell signaling, cancer and stem cells. Classical cell biology will be discussed in historical perspectives. Current techniques used in the study of cell biology will be discussed in the appropriate sections. The course is divided into three modules: weeks 1-6, weeks 7-11, and weeks 12-15. 3 Credit Hours. Graduate Project required.

BY 531. Advanced Recombinant DNA Technology. 3 Hours.
Manipulation of genes and their regulations, and techniques used in recombinant DNA technology. Independent project required. Prerequisites: BY 311, BY 330, CH 233 and CH 460 or 461.

BY 535. Natural History of Vertebrates. 4 Hours.
Adaptations of vertebrates for survival in particular environments. Survey and classification of local vertebrates. Two lectures, one laboratory or field trip per week. Independent project required.

BY 535L. Natural History of the Vertebrates Lab. 0 Hours.
Lab must be taken with BY 535 lecture.

BY 540. Biology of Aging. 3 Hours.
Current understanding of aging, measuring aging changes, theories of aging and aging changes in various human systems. Prerequisites: BY 123 [Min Grade: C]

BY 555. Principles of Scientific Investigation. 3 Hours.
Methods of scientific process, experimental design, data interpretation and presentation, and scientific writing.

BY 560. Advanced Invertebrate Zoology. 3 Hours.
Selected topics. Lecture and student projects. Prerequisite: BY 255.

BY 567. Tropical Ecology. 3 Hours.
An overview of the major tropical ecotypes with emphasis on ecology of terrestrial, aquatic, and marine tropical organisms. Major portion of course taught at a tropical field station in the Caribbean. Lectures, laboratory, and field trips. Library research paper required. Prerequisites: Graduate Standing and Permission of Instructor.

BY 568. Galapagos Ecology. 3 Hours.
The ecology of the Galapagos Islands, with an emphasis on terrestrial & marine organisms. Major portion conducted on the Galapagos Islands. Lecture & field trips. Library research paper required. Prerequisites: Graduate Standing and Permission of Instructor. Prerequisites: BY 255 [Min Grade: D] or BY 256 [Min Grade: D] or BY 470 [Min Grade: D]

BY 569. Rain Forest Ecology. 3 Hours.
Overview of physical and environmental factors that structure the rainforest, biodiversity of life, and interactions of its organisms. A survey of prominent biota will be conducted. Major portion of course taught in Costa Rica. Lectures and field trips. Library research paper required. Prerequisites: Graduate Standing and Permission of Instructor.

BY 570. Ecology. 3 Hours.
The study of interactions between organisms and their environment. An introduction to ecological processes at individual, population, community, and ecosystem levels and their relevance to current environmental problems. Lectures. Independent project required. Prerequisite: Graduate Standing.

BY 573. Biochemical Adaptation to the Environment. 3 Hours.

BY 585. Northern Field Studies. 3 Hours.
Ecology of northern coniferous forest and tundra ecosystems. Major portion of course taught on site in Alaska. Lecture and field trips. Graduate project/paper required. 3 hours. (Irregular offering).

BY 595. Special Topics in Biology I. 1-4 Hour.

BY 596. Special Topics in Biology II. 0-4 Hours.

BY 597. Investigative Techniques. 2 Hours.

BY 598. MR Lev Non-Thesis Research. 1-10 Hour.

BY 605. Microbial Physiology. 3 Hours.
Microbial structure and function, growth, metabolism, and regulation of cellular activity. Independent project required. Prerequisites: Permission of instructor. 3 credit hours.

BY 607. Microbial Ecology. 3 Hours.
This course examines microorganisms in their natural habitats, with a focus on soil and aquatic ecosystems as well as symbiotic interactions between microbes and animals and plants. Students will learn both theory and practical techniques for studying microbial ecology, including hands-on exposure to modern bioinformatic analysis methods for microbial communities. Independent project required. 3 credit hours.

BY 610. Comparative Animal Physiology. 3 Hours.
Special physical and chemical processes occurring at cell tissue, and organ levels. Independent projects required.
BY 611. Advanced Human Anatomy. 4 Hours.
This course is a detailed, advanced examination of human anatomy and histology. In a laboratory setting, students will achieve course objectives from dissecting a human cadaver, and observing prosected cadavers and casted models.

BY 612. CIRTL-Biology. 1-4 Hour.
This discipline specific seminar course in CIRTL (The Center for the Integration of Research, Teaching and Learning) - Biology is specially designed to offer students a hands-on opportunity to do an in-depth analysis on various effective teaching techniques that can be utilized in a typical college classroom setting. In the light of this analysis, students are expected to deliver a presentation simulating a classroom lecture on any topic related to Biology or if they prefer, they can also give an oral presentation on any pedagogical topic.

BY 613. CIRTL Service-Learning Workshop. 1 Hour.
This workshop offered by the Department of Biology for CIRTL (The Center for the Integration of Research, Teaching and Learning) @UAB is specially designed to offer students a hands-on opportunity on designing a service-learning course in the realm of their study with an added emphasis on the importance of service-learning in today’s classroom.

BY 614. Advanced Cell Biology. 3 Hours.
This course will focus on understanding cell signaling, function, and dynamics, which is the core of modern cell biology topics. This course is targeted to students who are interested in the advanced level current topics of Cell Biology. Topics include the cellular organization and function, cell cycle, autophagy, apoptosis, stem cell and cellular signaling pathways. This course also includes reading of primary literature, and writing and presenting a research proposal. Graduate project required.

BY 616. Cellular Physiology. 3 Hours.
Structure and function of cells and their components at the molecular level. Laboratory experience using modern equipment and biochemical methods. Independent project required.

BY 618. Colloquium in Biology of Aging. 1 Hour.
The course will focus on readings and interpretation of scientific papers, data, and experimental results relevant to endocrinology and aging. In addition to readings, oral presentations, discussions, and a research proposal are the major components of the course.

BY 619. Reproductive Physiology. 3 Hours.
Comparative reproductive physiology in animals with emphasis on mammals. Independent project required.

BY 620. General Endocrinology. 3 Hours.
The central theme of this course is the role of hormone chemical messengers in the regulation of physiological processes. Topics include structure of endocrine cells and glands, hormone synthesis and chemistry, physiological effects of hormones, and mechanisms of hormone action. Emphasis is placed on vertebrate systems, but instructive invertebrate systems are also considered. Term paper required.

Prerequisites: BY 256 [Min Grade: C]

BY 626. Evolutionary Medicine. 3 Hours.
An evolutionary approach to issues relating to human health and disease.

BY 628. Instruct Bio Labs: Teaching Techniques. 3 Hours.
Student will assist in instruction of an introductory biology laboratory. Responsibilities will also include preparation of quizzes and practicals and designing and conducting an instructional laboratory exercise.

BY 629. Evolutionary Biology. 3 Hours.
This course introduces the history of evolutionary thought and modern evolutionary theory. Discussions cover (but are not limited to) the history of life, mechanisms of evolutionary change, sexual selection, adaptation, speciation, and molecular evolution. Students will also be introduced to historical and contemporary studies of evolution on a wide variety of topics and organisms. Regular meetings outside of lecture will involve discussions of classic and contemporary research papers in the field.

BY 632. Biological Information Resources. 3 Hours.
The National Center for Biological Information (NCBI) website is a treasure house of information and tools for researchers in all areas of modern Biology. The goal of this course is to provide guidance for students who wish to become familiar with the NCBI website through an online learning experience. They will learn many of the features available at this site and will gain experience using some of the tools. The course will be taught completely online and will consist of 1) Guidelines for navigating through NCBI, 2) Study guide questions for students to answer online, 3) NCBI tutorials with questions to be answered online, 4) Assignments with questions to be answered online, 5) Online exams. Graduate levels require a graduate project.

Prerequisites: BY 123 [Min Grade: C] or BY 124 [Min Grade: C]

BY 633. Advanced Molecular Genetics. 3 Hours.
Examination of the molecular genetics of eukaryotic organisms, including genomes, nucleosomes, chromosomes, transcription, splicing, transposition and signal transduction. The role of molecular biology in immune diversity and cell growth will also be studied.

BY 634. Functional Genomics and Systems Biology. 3 Hours.
Systems biology is an inter-disciplinary study underlying complex biological processes as integrated systems of many interacting components. This course will give students a foundation in understanding complex biological interactions at the molecular, network and genomic level. This course will cover state-of-the-art high throughput established and novel approaches used in genome sequencing, transcriptomics, proteomics and metabolomics to obtain, integrate and analyze complex data. The students will also get familiar with knowledge on experimental perturbation of genomes, gene regulatory networks, comparative genomics and evolution, basic bioinformatics. This course will be a combination of text based lectures and discussions of the current literature relevant to Functional Genomics and Systems Biology.

Prerequisite: BY210 minimum grade of C.

BY 636. Biological Processes in Aging. 3 Hours.
The #1 threat to human health – far greater than cancer, heart disease, and Alzheimer’s disease combined – is aging. Aging is also a fascinating biological puzzle. Why do we, and virtually every other species, age in the first place? Why can’t nature simply maintain the body it built? This course will introduce you to the fascinating process of biological aging, its impact on human and animal life, how it evolved, and the manner in which its biology is investigated, the cellular and molecular process that underlie aging, and how efforts to slow human aging are progressing. We will cover the history of exceptionally long human and animal lives and also delve into current and historical approaches to alter the rate of aging in humans with an emphasis on current promising research areas. In covering this material we will also encounter some of the many colorful scientists who have worked on the problem of aging as well as the past and current frauds and charlatans who are just trying to make a buck off of people’s fear of death and disability.

Prerequisites: BY 123 [Min Grade: C] and BY 210 [Min Grade: C]
BY 637. Epigenetics. 3 Hours.
This course provides a survey of the field of epigenetics, introducing the student to the diverse areas of epigenetic research in a variety of eukaryotic systems. The course combines lectures with discussion of primary literature and research talks from invited faculty speakers working in epigenetics. In addition to providing an overview of the field of epigenetics, this course emphasizes working with primary scientific literature and the development of critical reading skills. Additional assignments are required for graduate credit.

BY 640. Immunology. 3 Hours.
Immune system and functions of host humoral and cellular immune responses. Mechanisms of antigen and antibody reactions and basic immunological methods. Term paper required.

BY 642. Experimental Phycology. 4 Hours.
Introduction to algae. Experimental approaches to productivity. Algae as model systems. Independent project required. Concurrent enrollment in BY 642 lab required.

BY 642L. Experimental Phycology Lab. 0 Hours.
Lab must be taken concurrently with BY 642 lecture.

BY 645. Neuroanatomy. 4 Hours.
This course will provide detailed lecture and laboratory experiences that describe the anatomy of the human brain, spinal cord, and peripheral nervous system. Students will culture rat hippocampal neurons and map the cerebral and cerebellar cortex on preserved human brains. Deep brain structures will be identified and their functional significance explored. Cranial nerves and major peripheral nerves will be described and identified through cadaveric dissections. Normal pathways will be contrasted with examples of abnormalities along with the resulting functional impairments. Graduate credit will be earned through the completion of additional term papers and/or projects.

BY 646. Techniques in Biological Research. 3 Hours.
Concepts and practical application of techniques pertinent to biological research.

BY 648. Psychoneuroimmunology. 3 Hours.
Explores communication between neuroendocrine and immune systems.

BY 652. Field Botany for Teachers. 4 Hours.
Principles and techniques of plant identification and classification; consideration of phylogenetic systems. Lectures and field trips. Independent project required.

BY 652L. Field Botany Lab. 0 Hours.
Lab must be taken with BY 652 lecture.

BY 655. Biometry. 3 Hours.
Statistical techniques used to analyze and interpret data, with emphasis on biological applications. Lecture and computer-based laboratory. 3 semester hours. Graduate standing and permission of instructor.

BY 656. Comparative Vertebrate Anatomy. 4 Hours.
Study of the anatomical systems of vertebrates in an evolutionary and functional context. Covers form, function, development and phylogeny of vertebrates, with overviews of organ systems, and the major adaptive events of vertebrate evolution. Labs complement lectures with dissections of representative species, and surveys of specializations in other forms. Lecture and laboratory.

BY 656L. Comparative Vertebrate Anatomy Lab. 0 Hours.
Comparative Vertebrate Anatomy Lab required with BY 656 lecture.

BY 660. Comparative Developmental Biology. 3 Hours.
Introduction to biological basis of nervous system function. Comparative approach applying molecular, cellular, and systems' concepts to nervous system function is used to examine electrical and chemical signaling, neural circuitry, and cellular basis of behavior and neural development. Independent project required.

BY 662. Introductory Neurobiology. 3 Hours.
Introduction to biological basis of nervous system function. Comparative approach applying molecular, cellular, and systems' concepts to nervous system function is used to examine electrical and chemical signaling, neural circuitry, and cellular basis of behavior and neural development. Independent project required.

BY 667. Population Ecology. 3 Hours.
This course covers the structure and dynamics of populations with an emphasis on understanding how reproduction, mortality, and dispersal interact to control fluctuations in population size and structure. Special emphasis will be placed on the use of models to address specific applications in conservation biology and natural resource management. Independent project/paper required. Preqs: BY 570 & graduate standing or permission of instructor.

BY 668. Conservation Genetics. 3 Hours.
This intensive course will introduce students to the genetic tools of modern population biology – which ones are available, practical, and useful for particular questions – and how these genetic analyses have been applied to a wide variety of ecological topics, including: dispersal, life histories, recruitment, habitat and mate choice, local selection, genetic differentiation, the conservation of biodiversity, and speciation. Importantly, this course is an opportunity to become proficient at applying molecular tools to bolster ecological studies. Time will be spent in lectures and learning practical coding and data analyses.

BY 670. Scientific Communication. 3 Hours.
Becoming a professional biologist is challenging and requires mastering a variety of skills. This course complements the biological knowledge graduate students gain from other courses and their thesis research by providing training, experience, and critical feedback in the following areas.

BY 671. Biochemical Adapt Environment. 3 Hours.
Examination of physiological and biochemical adaptations of organisms to physical environment.

BY 673. Biochemical Adaptation to the Environment. 3 Hours.
Study of chemical interactions between organisms or between organisms and their environment. Topics include chemical signaling between organisms, sensing of the chemical environment, and chemical defenses against predators, pathogens, biofoulers, or competitors. Students will be introduced to these topics in a wide variety of terrestrial and aquatic habitats, with a special emphasis on marine organisms. Independent project/paper required. Preq: Graduate standing.

BY 674. Chemical Ecology. 3 Hours.
Study of chemical interactions between organisms or between organisms and their environment. Topics include chemical signaling between organisms, sensing of the chemical environment, and chemical defenses against predators, pathogens, biofoulers, or competitors. Students will be introduced to these topics in a wide variety of terrestrial and aquatic habitats, with a special emphasis on marine organisms. Independent project/paper required. Preq: Graduate standing.

BY 675. Comparative Developmental Biology. 3 Hours.
Mechanisms of development with emphasis on comparative biology. Graduate standing.

BY 677. Comparative Vertebrate Anatomy. 3 Hours.
Comparative Vertebrate Anatomy Lab required with BY 656 lecture.
This course provides the student with an exposure to a wide range of basic epigenetics research topics. It will promote scientific literacy, discussion skills, and critical thinking skills. In addition, students will gain experience developing lectures and providing constructive criticisms to their peers.

**BY 681. Colloquium in Physiological Ecology. 1 Hour.**

Prerequisites: GAC Z

MESC-Marine Environmental Sci Courses

MESC 506. Marine Biology for Teachers. 6 Hours.

MESC 516. Physiology of Marine Animals. 4 Hours.

MESC 538. Marine Zoogeography. 4 Hours.

MESC 539. Oceanology of the Gulf of Mexico. 4 Hours.

MESC 541. Benthic Community Structure. 4 Hours.
Benthic Comunity Structure.

MESC 543. Plankton. 4 Hours.

MESC 550. Marine Plant and Animal Interactions. 2 Hours.
Marine Plant and Animal Interactions.

MESC 560. Marine Geophysical Processes. 3 Hours.

MESC 565. Estuarine Biology. 4 Hours.

MESC 570. Field Marine Science. 2 Hours.

MESC 580. Marine Paleoecology. 4 Hours.

MESC 592. Seagrass Ecosystems. 2 Hours.

MESC 595. Phytoplankton Ecology and Physiology. 2 Hours.
Phytoplankton Ecology and Physiology.

MESC 611. Marsh Ecology. 4 Hours.
Habitat analysis, natural history studies, and population dynamics of selected marsh organisms. Lecture, laboratory, and fieldwork.

MESC 612. Marine Ecology. 4 Hours.
Bioenergetics, community structure, population dynamics, predation, completion, and speciation in marine ecosystems. Lecture, laboratory, and fieldwork.

MESC 614. Advanced Marine Ecology. 2 Hours.
Mechanisms controlling the distribution of marine organisms. Major concepts in marine ecological theory.

MESC 615. Coastal Ornithology. 4 Hours.
Coastal and pelagic birds, with emphasis on ecology, taxonomy, and distribution. Lecture, laboratory and field trips.

MESC 618. Benthic Ecology. 2 Hours.
Factors controlling life cycles of marine benthic organisms and organization of their communities.
MESC 619. Marine Microbial Ecology. 3 Hours.
Survey of the types of microorganisms found in the marine environment and their interactions with each other and their environment.

MESC 620. Coastal Ecosystems Dynamics. 2 Hours.
Investigation of the structure and function of a variety of coastal ecosystems and evaluation of energy and nutrient processing in disparate ecosystems.

MESC 621. Marine Plankton. 3 Hours.
Taxonomy and biology of marine phytoplankton, bacterioplankton and zooplankton.

MESC 622. Chemical Oceanography. 3 Hours.
An in-depth examination of the chemistry of seawater and its relationship with biological, geological and physical processes in the oceans.

MESC 623. Geological Oceanography. 3 Hours.
Historic and current consequences of both geophysical and classic geological processes as they relate to the marine environment. Tectonic theory, sedimentary processes, stratigraphy, micropaleontology, erosion, and the formation of hydrocarbons.

MESC 625. Physical Oceanography. 3 Hours.
Physical properties of the world's oceans. Waves, tides, circulations, fluctuations, and interactions of the sea with the atmosphere and landmasses.

MESC 626. Biological Oceanography. 3 Hours.
Chemical, physical and geological patterns and processes important in the interaction of organisms and the sea.

MESC 627. Fisheries Oceanography. 2 Hours.
Examination of the relationships between fish life history, recruitment dynamics and harvest potential, and local-, meso-, and global-scale oceanography processes.

MESC 629. Fisheries Techniques. 3 Hours.
Current biological and technological methodologies for studying fishes and aquatic habitats, with emphasis on study design and integration across subdisciplines.

MESC 630. Marine Biogeochemical Process. 2 Hours.
Understanding how biogeochemical processes regulate ecosystem function in the marine environment.

MESC 631. Sediment Biogeochemistry. 3 Hours.
Sediment biogeochemical processes and their effects on nutrient cycles, plant production, and animal distribution.

MESC 632. Ocean Variability and Global Change. 2 Hours.
Examination of large-scale, spatial and temporal variability in the earth/ocean system.

MESC 633. Marine Biogeography & Paleobiol. 3 Hours.
Overview of the time course of evolutionary changes in marine ecosystems and the role of historical factors influencing the distribution of marine organisms. Lecture and field trip.

MESC 634. Marine Resource Management. 2 Hours.
Management of marine resources, development of legislation, and impacts of management on human resources.

MESC 635. Marine Analytical Instrumenta. 3 Hours.
Overview of the major analytical tools available to marine scientists.

MESC 636. Oceanographic Experiences. 1-3 Hour.
Participation in an oceanographic research cruise. Research project report.

MESC 670. Field Marine Science. 2 Hours.
Two-week field exercise at selected sites along the Gulf of Mexico and Atlantic shoreline of North America. Pretrip lectures and readings.

MESC 692. Seagrass Ecosystem Ecology. 2 Hours.
Ecology of seagrass systems of estuarine environments.

MESC 693. Seminar in Marine Science. 1 Hour.
Current research.

MESC 694. Directed Studies on Marine Topics. 1-6 Hour.
Research on Marine Topics.

MESC 696. Special Topics in Marine Science. 1-6 Hour.

MESC 714. Advanced Marine Ecology. 2 Hours.
Mechanisms controlling the distribution of marine organisms. Major concepts in marine ecological theory.

MESC 716. Physiology of Marine Animals. 4 Hours.

MESC 718. Benthic Ecology. 2 Hours.
Factors controlling life cycles of marine benthic organisms and organization of their communities.

MESC 719. Marine Microbial Ecology. 3 Hours.
Summary of the types of micro-organisms found in the marine environment and their interactions with each other and their environment.

MESC 720. Coastal Ecosystems Dynamics. 2 Hours.
Investigation of the structure and function of a variety of coastal ecosystems and evaluation of energy and nutrient processing in disparate ecosystems.

MESC 721. Marine Plankton. 3 Hours.
Taxonomy and biology of marine phytoplankton, bacterioplankton and zooplankton.

MESC 722. Chemical Oceanography. 3 Hours.
An in-depth examination of the chemistry of seawater and its relationship with biological, geological and physical processes in the oceans.

MESC 723. Geological Oceanography. 3 Hours.
Historic and current consequences of both geophysical and classic geological processes as they relate to the marine environment. Tectonic theory, sedimentary processes, stratigraphy, micropaleontology, erosion, and the formation of hydrocarbons.

MESC 725. Physical Oceanography. 3 Hours.
Physical properties of the world's oceans. Waves, tides, circulations, fluctuations and interactions of the sea with the atmosphere and landmasses.

MESC 726. Biological Oceanography. 3 Hours.
Chemical, physical and geological patterns and processes important in the interaction of organisms and the sea.

MESC 727. Fisheries Oceanography. 2 Hours.
Examination of the relationships between fish life history, recruitment dynamics and harvest potential and local-, meso-, and global-scale oceanographic processes.

MESC 729. Fisheries Techniques. 3 Hours.
Current biological and technological methodologies for studying fishes and aquatic habitats, with emphasis on study design and integration across sub-disciplines.

MESC 730. Marine Biogeochemical Process. 2 Hours.
Understanding how biogeochemical processes regulate ecosystem function in the marine environment.
MESC 731. Sediment Biochemistry. 3 Hours.
Sediment biogeochemical processes and their effects on nutrient cycles, plant production and animal distribution.

MESC 732. Ocean Variability & Global Cha. 2 Hours.
Examination of large-scale, spatial and temporal variability in the earth/ocean system.

MESC 733. Marine Biogeography & Paleobio. 3 Hours.
Overview of the time course of evolutionary changes in marine ecosystems and the role of historical factors influencing the distribution of marine organisms. Lecture and field trip.

MESC 734. Marine Resource Management. 2 Hours.
Management of marine resources, development of legislation, and impacts of management on human resources.

MESC 735. Marine Analytical Instrument. 3 Hours.
Overview of the major analytical tools available to marine scientists.

MESC 736. Oceanographic Experiences. 1-3 Hour.
Participation in an oceanographic research cruise. Research project report.

MESC 738. Marine Zoogeography. 4 Hours.

MESC 739. Oceanology of the Gulf of Mexico. 4 Hours.

MESC 741. Benthic Community Structure. 4 Hours.

MESC 743. Plankton. 4 Hours.

MESC 750. Marine Plant and Animal Interactions. 2 Hours.
Marine Plant and Animal Interactions.

MESC 760. Marine Geophysical Processes. 3 Hours.

MESC 765. Estuarine Biology. 4 Hours.

MESC 770. Field Marine Science. 2 Hours.
Two-week field exercise at selected sites along the Gulf of Mexico and Atlantic shorelines of North America. Pre-trip lectures and readings.

MESC 780. Marine Paleoecology. 4 Hours.

MESC 792. Seagrass Ecosystems Ecology. 2 Hours.
Ecology of seagrass systems of estuarine environments.

MESC 793. Seminar in Marine Science. 1 Hour.
Current research.

MESC 794. Directed Studies on Marine Topics. 1-6 Hour.
Research on marine topics.

MESC 795. Phytoplankton Ecology and Physiology. 2 Hours.

MESC 796. Special Topics in Marine Science. 1-6 Hour.
